EDUCATION

University of British Columbia

Vancouver, Canada

Bachelor of Science in Computer Science and Physics; Dean's Honour List; GPA: 3.73

Sep 2020 – Apr 2025

TECHNICAL SKILLS

Programming: C#, Python, JavaScript/TypeScript, Go, C/C++, Java, SQL

Frameworks/Tools: .NET, React, Node.js, Docker, Kubernetes, Git, GitHub Actions

Technologies: AWS (S3, EC2, Lambda, API Gateway), Azure, PostgreSQL, MongoDB, REST APIs

EXPERIENCE

Solirius Reply

London, UK

Software Engineer

Jan 2026 – Present

- Developed .NET backend services for Homes England's digitalisation of the **£24.7 billion** Help to Buy loan portfolio within a multidisciplinary government digital team.
- Contributed to alpha-stage service delivery and preparation for a UK Government Digital Service assessment, using Azure DevOps within a structured .NET delivery environment.
- Organised and facilitated an AI-assisted engineering hackathon for 20+ participants, using Microsoft Copilot to rapidly prototype solutions within the project's .NET architecture.

3DQue

Vancouver, Canada

Fullstack Software Engineer

May 2024 – Dec 2024

- Led frontend refactoring using React and Tailwind creating an introductory tagging system for 3D prints, reducing time-to-locate-items by **40%**
- Optimized API response times by rewriting critical endpoints in Go for improved concurrency reducing response times from **1.4s to 0.8s**
- Developed the Direct2Print system enabling seamless integration with Shopify and Etsy platforms resulting in increased user acquisition and streamlined order processing

MineSense Technologies

Vancouver, Canada

Software Engineer

May 2022 – Dec 2022

- Developed data capture utilities for ShovelSense R&D improving real-time telemetry quality by **37%**
- Built software to interface with XRF detector hardware and stream metrics for operators, cutting average sensor test time by **> 50%** and doubling bench throughput.
- Introduced CI/CD pipelines for rapid deployment and vulnerability detection, catching **10+** issues per week

PROJECTS

yapyap | React Native, TensorFlow, AWS, MongoDB

nwHacks Winner, 2024

- Co-developed 'yapyap', an anonymous journaling app integrated with ML for sentiment organization
- Trained and integrated a Bidirectional RNN model built in TensorFlow for sentiment analysis model to classify journal entries with emotional states
- Implemented an AWS backend with REST endpoints and a MongoDB schema for users, entries, and tags

Amazon RECRUIT | React, Node.js, Express, PostgreSQL, Docker, OpenAI API

Academic Project, 2025

- Collaborated with Amazon to ship an AI recruiting portal in 4 months (job posts, ATS, AI screening)
- Implemented AI interview facilitation via OpenAI API, tailoring technical and behavioral questions from resumes with RAG
- Containerized services with Docker and set up CI/CD (GitHub Actions) for test, build, and deployment

ACHIEVEMENTS

- IBM RAG and Agentic AI Professional Certificate — IBM, 2025
- AI for Software Development Certificate — DeepLearning.AI, 2024
- Best Design, Community Track Winner — nwHacks 2024
- Winner, Sustainability Track — StormHacks 2024
- Research Grant — Google Vulnerability (bugSWAT), 2023
